

Synthesis Service

Fluorescent Labeling Service

Based on bioconjugation-specialized technique for antibody, protein and peptide, Flamma®Fluors provides a wide range of labeling options with a variety of fluorescent specifications and labeling methods, and other fluorescent labeling options are also available besides Flamma®Fluors.

Organic Synthesis Service

Organic synthesis services of BioActs provides on-demand services that label fluorescent substances on various materials from small molecules like drugs to biologically-derived substances such as hormones and vitamins, piezoelectric polymers such as dextran and chitosan, and nanoparticles such as polystyrene beads.
